RESIDENTIAL TOWNSHIPS

RESIDENTIAL ARCHITECTURE

A residential architect develops buildings ideas, concepts, and design for residential buildings, homes, condominiums and other structure where people live. A residential architect creates designs for houses and other residential properties. Architect may create design that fit into certain space, limit or budget. Residential architect are design professionals who specialize in the design and construction of residential buildings such as bungalows, flats, tenements, etc. residential architects are concerned with aesthetic of residential buildings as well as it's functionality.

RESIDENTIAL INTERIOR

Residential interior design is the creative, aesthetic and functional living space. Designer work with the architect to ensure the appropriate division of private versus public space and can also aesthetically divide or unify rooms through colors, texture and patterns. Residential interior designer needs to focus on concepts for better designing.

COMMERCIAL COMPLEXES & MALLS

COMMERCIAL ARCHITECTURE

Commercial property refers to buildings or lands that have potential to generate a profit from rental income or capital gain. The commercial real estate industry is specific in defining sectors that make this category of buildings. A piece of real estate that is used for business operations and activity constitutes commercial property. Commercial property includes buildings that are used for commercial purpose which includes office buildings, warehouses, retail shops, retail buildings, shopping mall, etc. where space allocated to multifunction is significant these buildings can be called multi- use.

COMMERCIAL INTERIOR

Office interior designs have turned into a zone of much significance and contemplation in an age where real piece of the day is spent in the office space. Commercial interior design plays a central role in the success of any business. Interior designer seeks to increase functionality and elevate style for financial gain. Whether it's a mall or a small business owner, it is up to the commercial interior design to translate your vision to the client in ways that are practical, profitable and of course chic. Where looking at interior we can talk about two main things physical space and aesthetics. Physical space enhance the purpose of commercial structure. The design of commercial building is based on usability space needs to be useable for both employees and customers in order to maximize profit.

INDUSTRIES, LABS & WARE HOUSES

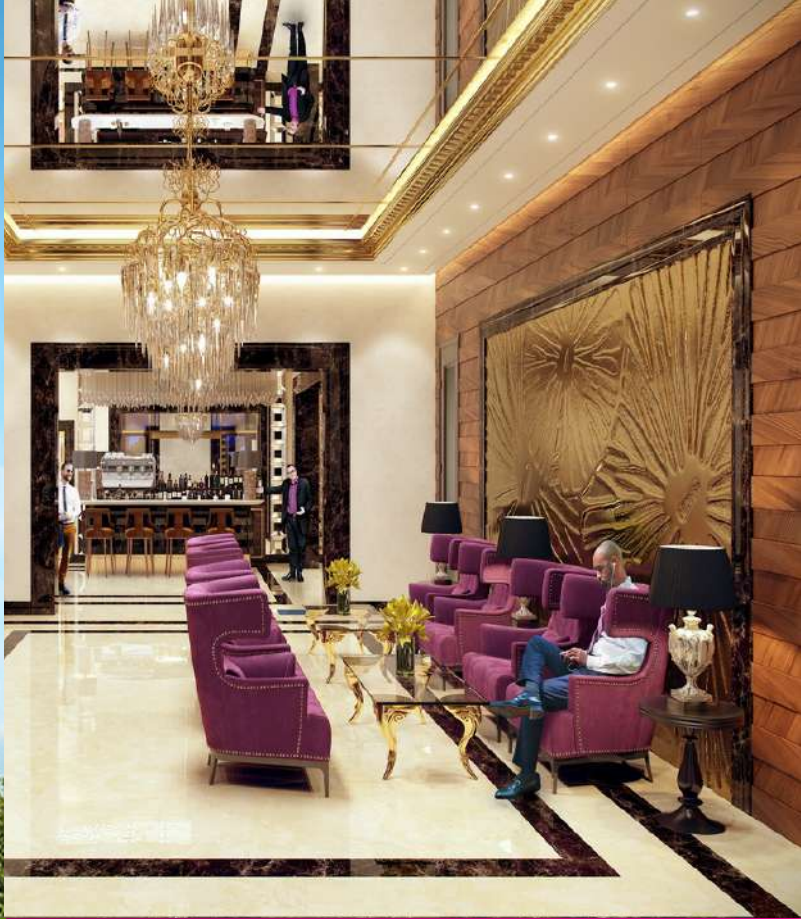

INDUSTRIAL ARCHITECTURE

Industrial architecture in India has a historical aspect. Industrial architecture is the design and construction of buildings which manufactures some products. There are different types of industries such as textile, chemical, pharmaceutical, mechanical, auto industries, foundries, research labs and many other types. While designing industries, architect has to maintain proper co-ordination between function, circulation and services.

INDUSTRIAL INTERIOR

Industrial interior includes the open assembly for floor facilitated flexibility for changing purpose and for producing quality products. The interior are also designed for easy change in future. Large fans are incorporated for air circulation throughout and office environment utilizes landscape with open partition for open communication between departments.

HOSPITALS & HOTELS

HOSPITALS & HOTELS ARCHITECTURE

Hospital architecture includes different types of hospitals like, children's hospital, clinics, community hospital, nursing homes, etc. it's vital role for hospital architecture to keep operational aspects in the foreground during planning and designing process. Hospital architecture features bright rooms, access to natural lights, big windows, local plant life, outdoor view, emergency medical store, operation theatre etc. Hotel architecture includes facilities like luxurious rooms, swimming pool, Jacuzzi, gymnasium, restaurants, spa, dine-in restaurant etc.

HOSPITALS & HOTELS INTERIOR

Making your hospital design for the interior, proper space management is very essential, features like emergency ward rooms, pathological rooms and radiologist rooms out in proper manner which results in enough space creation to carry out the entire treatment process without difficulty. When you enter a hotel one of the first thing you will notice is decor. Interior of hotel and restaurant is very important to influence customers before they have been there. Hotel interior involves various functionality like swimming pool, fitness centre, spa, jacuzzi, etc. Whereas restaurants have fine dine-in, takeaway and resorts have indoor gaming, tennis and basketball court, dine-in etc.
